

Player Website USB Update Release - Nov 2009.

Dear DDR Fans,

Just a quick line to let you know we have now shipped the latest update for the DDR X game to the locations in Europe.

This update will allow the USB edit function to work on the game therefore you are able to use the following website to design your own steps to music tracks on DDR X.

<http://ddredit.konamionline.com/ddrse/>

There are simple instructions on the website to follow and we are sure your guys will get a lot of fun from the system, designing and playing your own steps and swapping them with others (it is possible to e-mail the file to other players to use on their machines with a USB memory stick). Please note that the data is region sensitive therefore US created data will not work on EU machines.

The update requires the location to update the software on the machine and the new serial number should be HDX:E:A:A:2009091100. This information is shown in the top left corner of the screen during the "Attract Mode" (e.g. when no one is playing the game) when the DDR X logo is on the screen. If you find any locations in Europe not running this version of the software please feel free to contact us on the following mail address and we will follow it up - enquiries@konami.co.uk

It is easy to see which machines have the Edit Function enabled on them as again in "Attract Mode", the following logo is shown in the top right corner of the screen when the DDR X logo is shown.

Hope you enjoy and we look forward to reading your thoughts about it on the forums.

All the best

Konami Digital Entertainment
